Section 1 - Introducing CORe on iOS (Collect, Organize, Report)

Thank you for downloading LaserSoft® CORe for iOS from Laser Technology, Inc. (LTI)! Now you can quickly and easily record, save and share 3D measurements from the TruPoint 300 laser rangefinder to your phone or tablet. CORe can also store photographs. A virtual “pick-list” can be created with categories and subcategories for your measurement records with the option of including additional notes.

CORe project reports can be emailed over WiFi or downloaded to a computer via cable connection for further processing or adding into other databases.

Technical Specifications

CORe has been designed to run on iOS operating platforms for use in conjunction with Laser Technology's TruPoint® 300 laser measurement device.

<table>

</tbody>
</table>

Warranty Information

A copy of the LTI Limited Warranty should have shipped with the order. If needed, please contact LTI to obtain a copy of the LTI Limited Warranty. See the inside front cover for LTI contact information.
**Instrument Configuration**

CORe is designed to work with or without the Laser Aiming Assist (LAA) hardware:

- TruPoint 300 with LAA mounted on a tripod (Figure 1A)
- TruPoint 300 without LAA (Figure 1B).

**NOTE** The TruPoint 300 can also be used without LAA and mounted on a tripod.

![Figure 1](image.png)

**Laser Setup Notes**

The TruPoint 300 is designed to measure in 2D and 3D. When it is powered on, it is ready to begin taking measurements. The laser WLAN function needs to be turned on (Function/Settings/Bluetooth-WLAN option). Set the desired measurement units in the laser to feet/in or meter/cm (Function/Settings/Units). When using a target pole, ensure that the surface is non-reflective. Once the TruPoint is connected with the CORe app and a project has been started, the TruPoint is in data collection mode.

**NOTE** Refrain from pressing any buttons other than "Fire," "Send Data" or "Send Data with Image." Pressing any other button during data collection could interrupt the connection between the app and the laser. Refer to the TruPulse 300 manual for further instruction.

**Tablet Setup Notes**

In order to take advantage of all the new functionality in CORe, a few things need to be done with the iPhone:

1. Set the iPhone display to "Never" sleep. This keeps the screen from going dark during data collection.
2. Add a Wi-Fi (Internet) connection - go to Settings/Wi-Fi.
3. Add an email account - go to Settings/Mail/Accounts/Add Accounts (to add a dedicated email account, assistance from IT may be necessary).
Section 2 - Get Started with CORe

This section describes the download and installation procedure necessary to get started with CORe. It explains how to get the app from the App Store and then launch it. Once the application has been successfully launched, follow the instructions in this section to understand the main menu and configure the settings.

Get CORe from the App Store

To get the CORe app from the App Store:

1. Use the App Store search function to find "LaserSoft CORe" and learn about app pricing.
2. Tap the CORe icon to install the app as you would any other App Store application.

Pair the Laser with a Phone or Tablet

In order for data to be received from the laser to an iOS device, the two must be paired via WLAN. Once the laser has been connected to an iPhone or iPad, it will remain as a recognized device in the list of Wi-Fi networks, but must be selected prior to measuring if you are located within the device's default Wi-Fi network.

1. Tap Settings on the tablet’s main screen (Figure 2A).
2. Tap Wi-Fi (Figure 2B).
3. Find the laser serial number listed under "Choose a network..." (Figure 2C). If the laser serial number is not listed, ensure that the laser’s WLAN communication is turned on (Page 3).
4. Tap the laser-serial number (Figure 2C). When the laser displays as "Connected" (Figure 2D), it has been successfully added as a network option and is ready to begin measurements.

NOTE Depending on the operating system installed, not all iPhones/iPads will navigate to the Wi-Fi settings in same way as the example shown (iPhone 6 Plus/iOS 10); however, they will be very similar.

WARNING Due to the wide range of a WLAN connection, the TruPoint 300 can only be connected with one device at a time. If it is connected to more than one device (your phone and your tablet, for example) and those devices are within range of each other, the laser will not be able to make a connection to CORe.
Launch CORe

To launch the CORe app:

1. Find the CORe icon on the phone (Figure 3A).
2. Tap the CORe icon (Figure 3B).

About the Main Menu

This is the CORe main menu (Figure 4):

- Tap the back arrow at the top of the screen to leave CORe.
- Tap the iOS menu icon in the upper right corner of the screen to access:
  - Categories (category and subcategory management)
  - Settings
  - About CORe
- Tap [New Project] to begin a new data collection project
- Tap [Saved Projects] to select an existing project and:
  - Open/Add new measurements
  - Edit/Delete measurements
  - Send to Laser Technology for support
- Tap [Exit] to close CORe and return to the tablet main screen.
Manage Categories & Subcategories

Categories with accompanying subcategories may be created to help add clarity to field measurements stored using CORe. Categories and subcategories must be created prior to starting a new data collection project. Custom list options are available for selection from drop-down menus in the CORe data collection screen.

Add a Category

1. Tap the Menu icon in the upper-right corner of the screen and select Categories from the list of options (Figure 5A).

2. Tap the + icon in the Categories bar (Figure 5B).

3. Enter a new category name and tap [OK] (Figure 5C).

4. The new category will appear in the list of categories in alphabetical order (Figure 5D).

Figure 5
Add Subcategories

1. Access the Category Management screen (Steps 1 & 2 from the "Add A Category" section on Page 6).
2. Tap the category under which the subcategories will nest so that the category name is highlighted in gray (Figure 6A).
3. Tap the icon in the Subcategories bar (Figure 6A).
4. Enter the new subcategory name and tap [OK] (Figure 6B).
5. The new subcategory will appear in the list of categories in alphabetical order (Figure 6C).

![Figure 6](image-url)
Delete A Category

NOTE Deleting a category also deletes all the subcategories that are associated with it. Category and subcategory deletions cannot be undone; they can only be re-created.

1. Access the Category Management screen (Steps 1 & 2 from the “Add A Category” section on Page 6).

2. Tap the category to select it (category is highlighted in gray when selected), then tap the icon in the Categories bar (Figure 7A).

3. Tap [Delete] to confirm the deletion or tap [Keep] to cancel the deletion (Figure 7B).

![Figure 7](image-url)
Delete Subcategories

**NOTE** Individual subcategories can be deleted one at a time. Also, deleting an entire category will delete all associated subcategories at once along with the category. Category and subcategory deletions cannot be undone; they can only be re-created.

1. Access the Category Management screen (Steps 1 & 2 from the "Add A Category" section, Page 6).
2. Tap the category to access its associated subcategories list, then tap the subcategory to select it (subcategory is highlighted in gray when selected). Tap the icon in the Subcategories bar (Figure 8A).
3. Tap [Delete] to confirm the deletion or tap [Keep] to cancel the deletion (Figure 8B).

![Figure 8](image)

Configure Program Settings

In Program Settings, set the default unit of measure for all projects and enter an email address to which all project reports can be sent. Entering an email address in this area enables the "To:" field for the email to be auto-filled so an email address does not have to be entered each time a report is sent.

To access Program Settings:

1. Tap the iOS menu icon in the upper-right corner of the screen (Figure 9A).
2. Tap [Settings] from the list of options (Figure 9B).
3. Make changes, if necessary (Figure 9C). If any changes are made, tap [Save] to exit. Tapping the back arrow in the upper left corner will exit Settings without saving changes.

![Figure 9](image)
Additional Information

Localization

   English is the default language of most tablets. No matter what the default language is, it can be changed.
   To change the language:

   1. Power on the iOS device.
   2. Tap the Settings icon on the device home screen.
   3. Tap [Language & Region], then [iPhone Language].
   4. From the list of languages displayed, select the language to use for text display on the device.
   5. Tap [Done] to return to save the change.

NOTE Text in other programs may still be displayed in English which is typically the iOS device's default language.
Section 3 - Projects

When TruPoint measurements are collected with CORE, they are organized into Projects. New projects can be created and existing projects can be easily accessed and edited.

Create a New Project

From the CORE main screen, tap [New Project] to create a new data collection project. The New Project Settings screen will display (Figure 10).

How to fill out the New Project Settings screen:

1. Enter/Select the following:
   - Project Name: Enter a name for the data collection project.
   - Units: Tap to select units that match the laser.

2. Tap [Next] to proceed to the data collection screen.

   **NOTE** Any blank fields will be highlighted with an exclamation point. Enter the missing information and tap [Next].

![Figure 10](image)

Project Name

Additional information regarding file name entry:

- Project names may include any combination of alphanumeric characters (maximum of 30 alphanumeric characters).
- Four invalid characters include / \ & or space.
- An error message will be displayed if the project name includes an invalid character.
- Clear the message by clicking [OK] and enter a name using valid characters.
- Duplicate project names are not allowed. If an existing name is entered, a prompt will appear indicating that a duplicate project Name was entered. In order to proceed, the name must be changed.

Units

Tap to select the desired units of measurement for distance and angle to match those set in the laser. Choose from:

- Feet
- Meters
Save & Share Project Reports

CORe can generate reports for projects that are saved on the tablet. Project reports are transferable to a PC via cable connection or email. Saved project reports can be created in the following formats:

- **Text** - *.txt file can be opened with a text editor or spreadsheet program.
- **Spreadsheet** - *.csv file that can be opened with a spreadsheet program.
- **HTML** - *.html report zipped with images must be unzipped, saved to a PC and then opened using any browser.

Save a Project Report

To save a CORe Project report:

1. With the project open, tap the **Save** icon in the upper right corner of the screen (Figure 11A).
2. Choose to keep the name used when the project was created or enter a new one. Tap the **Report Format** drop down list to select a format to save. Tap the **Save** icon (Figure 11B).
3. The report has been saved on the tablet and appears in the Saved Reports section in the bottom half of the screen (Figure 11C). Saved reports display in this section with the most recently saved report at the top.

**NOTE** Connect the smart device to a PC and find the saved reports using iTunes here: Apps/CORe

![Figure 11](image-url)
Save & Share a Project Report

To save and send a CORe project report:

1. Ensure the tablet has access to WIFI and that an email account has been added. With the project open, tap the Save icon in the upper right corner of the screen (Figure 12A).
2. Choose to keep the name used when the project was created or enter a new one. Tap the Report Format drop down list to select a format to save. Tap the Save & Send icon (Figure 12B).
3. The report file is automatically attached to the email (Figure 12C) and:
   - Sends from the default email address set up on the iOS device.
   - Sends to the email address(es) assigned in CORe Settings (Page 9), or a different/additional email address can be entered.
   - Includes the report file name as the email subject line.
4. Tap [Send] or tap [Cancel] to abandon the operation (Figure 12C).

![Figure 12](image)

**NOTE** Reports can be transferred via a cable connection using iTunes. Connect the iOS device to a computer to launch iTunes. Select the iOS device contents, and choose "Apps" from the list of categories. Scroll to the bottom of the screen and click the CORe app to display the list of CORe reports. Select the reports to be transferred and then click "Save To..." (Figure 13). See Page 16 for complete instructions.

![Figure 13](image)
Manage Saved Project Reports

Reports saved on a smart device can be sent or deleted from within CORe. They can also be copied as a group using iTunes and a cable connection to a PC. In order to manage saved reports for any project, the project must first be opened.

Send a Saved Report

1. Tap the Save icon in the upper right corner of the data collection screen (Figure 14A). All previously saved reports for any project are accessed via the Save icon.
2. The Saved Reports section displays in the lower half of the Save screen. Tap the saved report you wish to send, and then tap the Send icon (Figure 14B).
3. The report file is automatically attached to the email (Figure 14C) and:
   a. Sends from the default email address set up on the tablet.
   b. Sends to the email address(es) assigned in CORe Settings (Page 9), or a different email address can be entered.
   c. Includes the report file name as the email subject line.
4. Tap [Send] or tap [Cancel] to abandon the operation (Figure 14C).

Figure 14
Delete a Saved Report

1. Tap the Save icon in the upper right corner of the data collection screen (Figure 15A).
2. The Saved Reports section displays in the lower half of the Save As screen.

   Tap the saved report to be deleted, and then tap the Delete icon (Figure 15B).

3. Tap [Delete] to confirm the deletion or tap [Keep] to abandon the operation (Figure 15C).

![Figure 15](image-url)
Transfer Reports/Data to a PC

In addition to email, reports can be transferred via a cable connection using iTunes. Connect the iOS device to a computer to launch iTunes. Select the phone contents, and choose "Apps" from the list of categories. Scroll to the bottom of the screen and click the CORe app to display the list of CORe reports. Select the reports to be transferred and then click "Save To...".

1. Connect the iOS device to a PC with the USB cable that accompanies the device.
2. iTunes should automatically open when it recognizes that the smart device is connected to the PC. If not, double-click the iTunes icon to open it.
3. Click the device icon in the upper left area of the iTunes program to display category options in the left pane (Figure 16).
4. Click "Apps."

Figure 16
5. Scroll to the bottom of the right pane to find the File Sharing section and select the CORe App. Any saved CORe reports will display in the right-hand pane.
6. Click reports to select/highlight them for transfer, then Click [Save to...] (Figure 17).
7. Browse to a folder on the PC and Click [Select Folder].

Sample HTML Report:

![Sample HTML Report](image-url)
Delete Saved Reports

For the purpose of managing the smart device's memory and resources, it can be helpful to delete reports and projects from the device after they have been safely transferred to a PC. When Corre is installed on a smart device, it creates a folder named Corre for storing program settings, reports, and projects.

**NOTE** If Corre is uninstalled from the smart device, all projects and reports are deleted as well. If you must uninstall and re-install the app, make sure that you transfer over project and report files before you uninstall (Page 16).

1. Open Corre and tap [Saved Projects] (Figure 19A).
2. Tap the project to be deleted and then tap the Delete icon (Figure 19B).
3. Tap [Delete] to confirm the deletion or tap [Keep] to abandon the operation (Figure 19C).
Section 4 - Measurements

TruPoint measurements transfer into CORe automatically via WLAN and can be added in one of three ways:

- Tap Remote Fire on the CORe data collection screen - With this method, the TruPoint will measure to the feature and send the data in one step.
- Press the FIRE button on the TruPoint and then press [Send Data] - For users who prefer to measure from the laser as opposed to the iOS device. This method requires two button presses to finish a measurement.
- Press the FIRE button on the TruPoint and then press [Send Data with Image] - Use this method to include the TruPoint image with the measurement; also requires two button presses to finish the measurement.

In this section, learn about the data collection screen, taking and saving measurements, and managing saved measurements in a project.

Data Collection Screen Overview

After a new project has been created, the CORe data collection screen will display:

Screen Overview Detail

Figure 20 displays the CORe data collection screen.

</tbody>
</table>
Connect to TruPoint

1. From the main data collection screen, tap the Laser Connection icon (Figure 21A) to establish connection to the laser (takes 2-4 seconds). The icon will change to reflect that the laser is connected and will also indicate if the battery life on the TruPoint is sufficient or requires a charge soon.

2. Level the TruPoint so the bubbles appear in the green area and the TruPoint beeps (Figure 21B).

3. Rotate the TruPoint reducing the green area until TruPoint beeps (Figure 21C).

4. Rotate the TruPoint a second time, reducing the green until the TruPoint beeps, and the main screen displays.

Add a Measurement

Measurements can be added to CORe with four different measurement types: Distance, Height, Missing Line, and Slope. Measurement types are selected prior to taking a measurement. Each measurement can include the image from the TruPoint and can be notated or clarified with Category and Subcategory assignments. See Pages 6 - 7 for instructions on adding Categories and Subcategories.

Each of the examples below is performed using the Remote Fire method for taking and transferring measurements into CORe. See Page 27 for detailed steps for adding a measurement by pressing FIRE on the TruPoint instead of using the Remote Fire icon in the CORe app.
**Distance**

Capture the distance measurement from the equipment position to any feature:

1. From the data collection screen, tap the Measurement Type drop-down list and select Distance (Figure 22A). CORe defaults to this Measurement Type each time a new project is created.

2. Aim the laser at the feature and tap the Remote Fire icon  to fire and receive the measurement result (Figure 22B).
   - Optional: Enter a note about the measurement or select a category (and subcategory, if applicable) to further clarify the measurement.

3. Reshoot or store the measurement (Figure 22B):
   - **To reshoot**: Tap the Reshoot icon  and repeat Step 2.
   - **To store**: Tap [Save] and the measurement is added to the scrolling measurement display area at the bottom of the screen (Figure 22C).

![Figure 22](image)
Capture the height measurement of any feature (3-shot routine):

1. From the data collection screen, tap the Measurement Type drop-down list and select Height (Figure 23A).

2. Aim the laser at the feature and tap the Remote Fire icon to fire (Figure 23B).

3. Aim the laser at the base of the feature and tap the Remote Fire icon to fire (Figure 23C).

4. Aim the laser at the top of the feature and tap the Remote Fire icon to fire and receive the height measurement result (Figure 23D).
   - Optional: Enter a note about the measurement or select a category (and subcategory, if applicable) to further clarify the measurement.

5. Reshoot, store or cancel the measurement (Figure 23D):
   - **To reshoot:** Tap the Reshoot icon and repeat Steps 2, 3 and 4.
   - **To store:** Tap [Save] and the measurement is added to the scrolling measurement display area at the bottom of the screen (Figure 23E).
   - **To cancel:** Tap the Cancel icon to abandon the height measurement routine prior to the display of the measurement results (Figure 23B and/or Figure 23C).
**Missing Line**

Capture the 3D measurement data between any two features (2-shot routine):

1. From the data collection screen, tap the Measurement Type drop-down list and select Missing Line.

2. Aim the laser at the first feature and tap the Remote Fire icon to fire (Figure 24A).

3. Aim the laser at the second feature and tap the Remote Fire icon to fire and receive the missing line measurement result (Figure 24B).
   - Optional: Enter a note about the measurement or select a category (and subcategory, if applicable) to further clarify the measurement.

4. Reshoot, store or cancel the measurement (Figure 24B):
   - **To reshoot**: Tap the Reshoot icon and repeat Steps 2 and 3.
   - **To store**: Tap [Save] and the measurement is added to the scrolling measurement display area at the bottom of the screen (Figure 24C).
   - **To cancel**: Tap the Cancel icon to abandon the missing line measurement routine prior to the display of the measurement results (Figure 24A).

(A)  (B)  (C)

Figure 24
**Slope**

Capture the measurement data for a slope (2-shot routine):

1. From the data collection screen, tap the Measurement Type drop-down list and select Slope.
2. Aim the laser to the top of the slope and tap the Remote Fire icon to fire (Figure 25A).
3. Aim the laser to the bottom of the slope and tap the Remote Fire icon to fire and receive the slope measurement result (Figure 25B).
   - Optional: Enter a note about the measurement or select a category (and subcategory, if applicable) to further clarify the measurement.
4. Reshoot, store or cancel the measurement (Figure 25C):
   - **To reshoot**: Tap the (Reshoot) icon and repeat Steps 2 and 3.
   - **To store**: Tap [Save] and the measurement is added to the scrolling measurement display area at the bottom of the screen (Figure 25D).
   - **To cancel**: Tap to cancel out of any multi-measurement routine prior to the display of the measurement results (Figure 25B).

![Figure 25](image-url)
**Add A Measurement - Press FIRE on the Laser**

The steps required to add a measurement using by pressing the Fire button on the laser are slightly different than using CORE's Remote Fire button.

1. From the data collection screen, tap the Measurement Type drop-down list and select the desired measurement type (Figure 26A). In this example, Distance is selected.

2. Aim the laser to the top of the slope and press FIRE on the laser. If the red dot is not already on, the FIRE button will need to be pressed a second time to take the measurement.

3. Tap on the laser to send the measurement to CORE.
   - Optional: Enter a note about the measurement or select a category (and subcategory, if applicable) to further clarify the measurement (Figure 26B).

4. Reshoot, store or cancel the measurement (Figure 26B):
   - **To reshoot:** Tap the Reshoot icon and repeat Steps 2 and 3.
   - **To store:** Tap [Save] and the measurement is added to the scrolling measurement display area at the bottom of the screen (Figure 26C).
   - **To cancel:** Tap the Cancel icon to abandon any of the multi-measurement routines prior to the display of the measurement results.

Figure 26
Add A Measurement with TruPoint Image

The image associated with each TruPoint measurement can be sent to the smart device with the measurement when the measurement is initiated from the TruPoint and not the smart device (i.e. the TruPoint image will not transfer to the smart device if the Remote Fire button is used). Depending on the number of measurements required for the selected measurement type, images for each measurement can be included and saved by using this method to take the measurement.

1. From the data collection screen, tap the Measurement Type drop-down list and select the desired measurement type (Figure 27). In the example screen shot below, Height was selected, and the last measurement of the height routine is displayed.
2. Press the Camera button on the TruPoint.
3. Aim the laser to the target and press FIRE on the laser. If the red dot is not already on, the FIRE button will need to be pressed a second time to take the measurement.

   **NOTE** To send a screenshot of the measurement: Press and hold the camera button for 1-2 seconds, release and see the camera image flash on the TruPoint screen. The screen shot includes the image with the crosshair and measurement result.
4. Tap on the laser to send the measurement and image to CORe.
   - Optional: Enter a note about the measurement or select a category (and subcategory, if applicable) to further clarify the measurement.
5. Reshoot, store or cancel the measurement:
   - **To reshoot**: Tap the Reshoot icon and repeat Steps 2 and 3.
   - **To store**: Tap [Save] and the measurement is added to the scrolling measurement display area at the bottom of the screen.
   - **To cancel**: Tap to cancel out of any multi-measurement routine prior to the display of the measurement results.

Figure 27
# Measurement Display Area Overview

All CORe projects display saved measurements in the scrolling measurement display area (which appears in the lower half of the screen of any open project, Figure 28A). Saved measurements can be reviewed, edited or deleted throughout the data collection process from this area (Figure 28B).

![Figure 28A](image1.png)

Each saved measurement in the Measurement Display area includes the following information:

- **No.** (Measurement Number) - CORe assigns a number to each saved measurement beginning with #1 and continuing to the end of the data collection process for the project.
- **Measurement Type** - The selected measurement type at the time it was taken and saved.
- **Measurement Result** - Depending on the selected measurement type, this field can display additional associated measurement values in addition to the end result of a measurement routine.
- **Category/Subcategory** - Any Category or Subcategory that was assigned; if none are assigned, "NA" displays by default.
- **Note** - If a note was assigned to a measurement, it displays under the measurement result; if not, that field is blank.
- **TruPoint Image(s)** - If a TruPoint image was included with any measurements taken, it displays at the bottom of the measurement (minimum of 1 and maximum of 3).

For instructions on editing or deleting measurements from the measurement display area, see Page 31.
Reshoot, Edit, or Delete A Measurement

It is possible to re-shoot or edit saved measurements in CORe. Before measurements have been saved, they can be re-taken. After measurements have been saved, they can be accessed for editing or deletion.

Reshoot a Measurement

If a measurement needs to be re-taken, tap the Reshoot icon on the data collection screen (Figure 29A) and add a new measurement. In this example, the previously measured distance would be replaced with the new measurement taken. This process can be repeated until the result is acceptable to the user.

Edit a Saved Measurement

Saved measurements in any project are displayed at the bottom of the CORe screen with the most recent measurement at the top. This scrolling measurement display is where saved measurements are reviewed and/or edited. Editing will not allow for a different measurement to be taken, it will only allow for editing of the note, category, and subcategory assigned to the measurement.

To edit these features of any saved measurement, do the following:

1. Open a CORe project.
2. Scroll to the measurement that needs to be edited and tap the Edit icon in the measurement display area (Figure 30A).
3. Add or edit the current note, category or subcategory. In this example, the note of "Maint Needed" was added. Tap [Save] or tap [Exit] to abandon the operation (Figure 30B).
4. The measurement display will update with the saved changes to the measurement (Figure 30C).
Delete a Measurement

Saved measurements in any project are displayed at the bottom of the CORe screen with the most recent measurement at the top. This scrolling measurement display is where saved measurements can be deleted. Once a measurement is deleted, it cannot be recovered.

To delete any saved measurement, do the following:

1. Open a CORe project.
2. Scroll to the measurement that needs to be deleted and tap (Delete) in the measurement display area (Figure 31A).
3. Tap [OK] to confirm the deletion or tap [Cancel] to abandon the deletion (Figure 31B).
4. The measurement display will update to no longer show the deleted measurement.

## Appendix A - Troubleshooting Tips

<table>
<thead>
<tr>
<th>Specification</th>
<th>Description</th>
</tr>
</thead>
</table>
| No communication between laser and the tablet.     | • Verify that the WLAN feature in the laser is turned on (Function/Settings/WLAN BT Communication).  
• Ensure that the laser is added to the smart device as a WLAN network. The laser can only be connected to one device at a time.  
• Tap the Laser Connection Indicator icon at the top of the data collection screen and wait 2-4 seconds for the icon to turn green.  
• Power the tablet OFF and back ON. Try the above steps again.  
• Delete the TruPoint 300 WLAN network from the tablet and re-add it. Re-open CORe and tap the Laser Connection Indicator icon. If the icon does not turn green within 2-4 seconds, there could be a problem with the WLAN function in the laser or smart device. |
| CORe closed unexpectedly.                           | If there is a 11-minute or more delay between shots, the TruPoint 300 may go to sleep. The connection to the tablet is lost which causes CORe to close unexpectedly. Re-establish Wi-Fi connection in tablet Settings, re-open CORe, and continue storing measurements. |
| The smart device locked up or doesn't seem to be working properly. | Power the smart device off and back on again. Press and hold the power button to see the options for resetting the device. No matter what, each measurement is saved as it is taken, and no data will be lost. |
| An error message was displayed while working in CORe. | Error messages are often self-explanatory. Clear the message and correct the error before proceeding. If the error continues, restart CORe. If the error persists, reset the tablet (see above). |
| A measurement was accidentally deleted.             | Re-do the measurement. Measurement deletions cannot be undone.                                                                                                                                               |
| TruPoint 300 Error Codes.                          | Error 256 – Return is too intense. If shooting to a target that is too reflective, the laser will return this error and will not take a measurement.  
Error 301 – Cannot acquire target. Try to get the measurement again, taking care not to move or shake the device. |

**CORe v1.x for iOS** requires iOS version 8.1 and newer. To check the version of the operating system of the smart device, navigate to Settings/General. These steps may vary slightly depending on the smart device.
